## EMSCHARTS ANNOUNCES PARTNERSHIP WITH HEALTHCALL

**February 20, 2017 -- Warrendale, PA** -- emsCharts, a leading provider of dynamic electronic data collection and management solutions for the emergency medical field, announces a partnership to integrate with HealthCall's patented community paramedicine platform.

The integration of the two platforms will provide EMS companies the ability to effectively manage patients from pre-hospital to diversified post-discharge care programs in real time.

"This partnership represents a new level of interoperability, bringing together the emsCharts state-of-the-art data management technology with the HealthCall proven community paramedicine platform," said Pete Goutmann, President and CTO of emsCharts.

The EMS Industry increasingly needs a robust platform to scale their community paramedicine programs without significant infrastructure costs and headcount.

Ultimately hospital administrators need to reduce readmissions and increase efficiency between post discharge care providers. Paramedics are one of the few segments of healthcare uniquely positioned to cost-effectively provide in-home follow-up care.

"We're excited to provide our clients with real-time integration into emsCharts," said Daniel Hayes, HealthCall's President and CEO. "With the incorporation of this functionality, paramedics can more quickly identify patients at risk. This gives them another tool to reach and engage patients proactively and make a difference in their lives."

emsCharts clients operating a CP-MIH program are eligible to participate in the early adopter program offered by HealthCall. Interested parties should contact their emsCharts or HealthCall sales representatives for additional information.

### About emsCharts

emsCharts is the leader in providing Electronic Patient Care Record (ePCR) software solutions to support public safety professionals both in the air and on the ground. A wholly-owned subsidiary of Golden Hour, emsCharts provides a fully integrated ePCR and Fire reporting system with an intuitive interface and HIPAA compliant infrastructure focused on a continuous commitment to program sustainability and growth. For more information about emsCharts, visit [www.emsCharts.com](http://www.emsCharts.com).

**About Golden Hour**

Golden Hour is the recognized leader in billing and reimbursement within the air medical transportation industry. With its integrated technologies, Golden Hour has compliantly collected billions of dollars on behalf of both air and ground medical transport programs. Currently supporting over 80% of the air medical market with its technology and Revenue Cycle Management (RCM) services, Golden Hour offers the industry's only patented, integrated solution.
