- Risk-Based Alerts
- Flexible Patient Assessments

“ **HealthCall delivers comprehensive HIPAA compliant solutions for COVID-19 prevention, tracking, and monitoring of large populations. Accountability and healthier self-care behaviors are fostered through greater transparency, more frequent communication and education.** ”

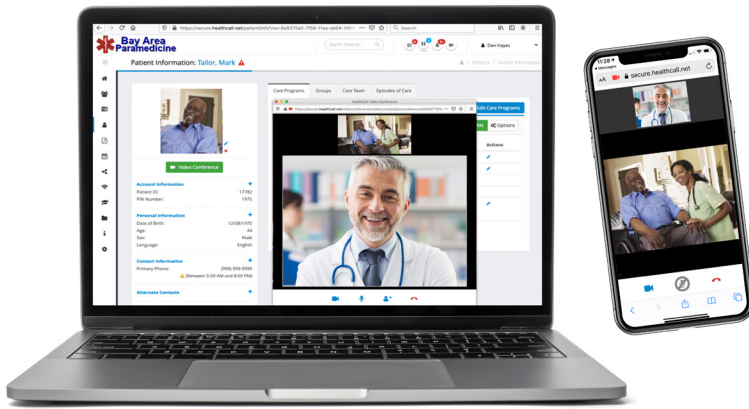

## Wellness Screening & Monitoring

Automate proactive screening of frontline workers for key signs and symptoms to reduce contagion, promote wellbeing, and mitigate liability. Supports large workforces across multiple locations, and multiple shifts. Accessible via all popular smartphones.

# Secure Video Consultations

**Access HealthCall on the devices  
you already use every day.**

Designed for virtual care and ET3 initiatives, HealthCall video service provides secure, fully integrated live streaming for up to 4 people. Simply clicking on the text or email link securely launches the video — no app or registration is needed. Fully integrated for automated documentation and billing. HealthCall cloud-based solutions are accessible across nearly all workstations, laptops, tablets and smartphones. Along with the necessary benefit of flexible access, you can now switch between devices with a consistent user experience with no learning curve.

## Remote Patient Monitoring (RPM)

Free from costly proprietary devices, HealthCall captures biometrics from a variety of devices, including blood pressure cuffs, weight scales, activity wrist bands, and pulse oximetry. Readings are displayed and graphed along with patient reported outcome measures. Biometrics device manufacturers can now build near-realtime integrations via the HealthCall open API.

## Patient-Centric Care Coordination

The HealthCall proprietary architecture and patented system is the foundation for true patient-centric care coordination.

- Individualize standardize care plans
- Easily trend signs and symptoms
- Create patient-specific care teams
- Seamlessly collaborate on tasks with non-users
- Analyze longitudinal outcomes HealthCall is built from the ground up to enable better care in less time for more patients.
